Employment

Trader Interactive

Software Engineer

July 2023 to Current

- Utilized JavaScript, TypeScript, Vue, PHP, Laravel, and Docker to develop web features
- Collaborated with cross-functional teams to strategize and deliver milestones across 8+ websites, ensuring timely feature rollouts and improved user experience for over 100,000 monthly visitors
- Streamlined the development process by building and implementing 30+ reusable Vue components, reducing code duplication and accelerating feature delivery by 15%
- Developed and maintained RESTful APIs using PHP, improving communication between frontend and backend systems, and enhancing data exchange with external services, reducing integration time by 25%

SharpNotions

Software Engineer

Rochester, NY

Dec. 2021 to June 2023

- Developed features using JavaScript, React, Ruby on Rails, Vue, PHP, Laravel, and Python
- Led frontend development with Vue, React, and Next.js, reducing client feedback turnaround time by 30% through rapid visual component delivery
- Contributed to the successful migration from Vue 2 to Vue 3, updating 50+ components to improve performance and scalability
- Created and maintained 100+ automated web tests using Cypress, improving test coverage and reducing manual testing time by 40%

Xerox

Software Engineer

Rochester, NY

Feb. 2020 to Dec. 2021

- Developed features using C#, .NET, JavaScript, Angular, React, and AWS
- Utilized Amazon Web Services for database storage, content delivery, application hosting, and security to add the most cutting edge functionality while optimizing cost
- Implemented 20+ automation test cases that saved developers and testers over 10+ hours in testing each sprint
- Collaborated with a team of 30+ developers, designers, management, and end users to enhance features in the product

Rochester Institute of Technology

Web Developer

Rochester, NY

Aug. 2019 to Feb. 2020

- Developed and maintained multiple RIT websites using HTML, CSS, PHP, JavaScript, Java, Angular, and Drupal 7 & 8, improving site load times by 25% and enhancing user experience
- Led daily scrum meetings, adopting agile methodologies, which increased team collaboration and reduced project delivery times by 20%
- Created and optimized components for RIT's eCommerce platform, building shop pages that boosted online sales and student engagement by 15%

Rochester Imaging Technology

Web Developer

Hilton, NY

June 2018 to July 2019

- Developed a comprehensive e-commerce website for selling industrial imaging products, including a homepage, add-to-cart functionality, checkout process, and 100+ product pages for cameras
- Built the site using WordPress, customizing general content through the platform
- Utilized PHP, CSS, and HTML to modify and enhance site content and layout
- Managed WordPress databases and configurations using cPanel for efficient content and data management
